**REQUEST FOR PRIMARY LENS LUXATION DNA RESEARCH RESULT**

Research at the AHT/KC Canine Genetics Group has now identified the mutation and developed a DNA test for Primary Lens Luxation (PLL) in the following breeds:-

**CHINESE CRESTED DOG / JACK RUSSELL TERRIER / LANCASHIRE HEELER / MINIATURE BULL TERRIER /  
PARSON RUSSELL TERRIER / PATTERDALE TERRIER / SEALYHAM TERRIER / TIBETAN TERRIER**

This test is now available through our DNA testing programme. This progress would not have been possible without the efforts of the many breeders and owners who have contributed samples to the AHT's research programme. If you are the current registered owner of a dog of one of the above breeds whose sample was submitted as part of the research programme into PLL, we will send you a result free of charge by email (with a nominal charge for a certificate).

Please return the form below with details of the dog to the AHT. Results will take up to 28 days from receipt of form.

**I certify that the sample submitted to the Animal Health Trust for DNA testing research was for the following dog:**

Registered Name of dog .....

Pet Name of dog .....

Registered No:.....

Microchip/Tattoo No:.....

**I confirm I am the current registered owner of the above dog and have supplied complete and accurate information to the best of my knowledge.**

Owner's Name:.....

Address:.....

.....

.....

Tel No:..... Fax No:.....

e-mail:.....
